ABOUT ME

Full-Stack / Backend Software Engineer with 5+ years of experience building scalable cloud applications using Python, AWS, Angular, and microservices. Strong focus on clean architecture, CI/CD automation, and backend design. Experience leading agile teams as Scrum Master and mentoring developers. PhD-level rigor applied to practical delivery, with a track record improving velocity, reliability, and architectural quality.

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Full Stack & Cloud)

Jan. 2024 – Today

Teknei

- Led the technical development of a serverless web and mobile application for technical assistance services, built with Python, Angular, and Flutter. Turned a prototype into a production-ready product. Improved reliability by refactoring the subscription and billing workflow, fixing critical bugs, and standardizing backend and frontend structure. Implemented CI/CD pipelines for all components, including automated Google Play releases, enabling weekly, minutes-to-production deployments.
- Directed the development of a new billing platform, designing it from scratch with Python, Angular, and AWS CDK, applying hexagonal architecture, achieving >80% test coverage, and automating cloud infrastructure. Delivered an integration-ready API for invoice synchronization with public administration systems.
- Took ownership of architecture, backlog refinement, engineering standards, and CI/CD workflows across both products.

Software Engineer (Full Stack & Cloud)

Nov. 2021 – Dec. 2023

Grupo Vermon

- Joined TMConnected to develop the MCO railway maintenance platform, a high-volume cloud SaaS platform serving 1500+ users across 160+ companies, monitoring 1000+ machines and handling millions of cloud events annually, including large-scale AWS Lambda workloads, multi-terabyte S3 storage, and hundreds of thousands of reports.
- Delivered new product modules using AWS, Python, microservices, ETLs, Angular and microfrontends.
- Led the development of a new notification service, processing 800k+ near real-time logs annually, and a maintenance management module built with microfrontends and hexagonal architecture, improving system scalability and maintainability.
- Introduced feature flags and CI/CD enhancements, reducing feature delivery from months to weeks.
- As Scrum Master, improved engineering practices by facilitating agile ceremonies, coaching developers, establishing flow metrics, adopting pair programming, and adding unit testing foundations to new projects, strengthening the reliability of a core revenue-generating product.

Researcher

Feb. 2021 – Oct. 2021

Universidad De Castilla-la Mancha

Designed and evaluated multi-objective optimization algorithms as part of R&D projects, using Python, Pandas, Numpy and Matplotlib.

HARD SKILLS

- Backend:** Python, Flask, Django, NodeJS, API REST, ETLs, Clean architecture, Hexagonal, queues, event bus.
- Frontend:** Angular, Flutter.
- Cloud & DevOps:** AWS, IaC (Serverless, CDK), Docker, CI/CD (GH Actions, BitBucket Pipelines).
- Databases:** MySQL, PostgreSQL, DynamoDB.
- Data:** Pandas, Numpy, ML basics.
- Tools:** Git, Jira, Confluence, Miro.

SOFT SKILLS

- Product mindset
- Agile leadership
- Mentoring & coaching
- Communication & collaboration

CERTIFICATIONS

 Cloud Practitioner + Solutions Architect Associate, AWS

 Professional Scrum Master II + Product Owner I, Scrum.org

 B2 - First Certificate In English, Cambridge

EDUCATION

 PhD In Advanced Computing Technologies, UCLM 2021 – 2025

 MSc Computer Science, UCLM – 5 honors 2020 – 2021

 BSc Computer Science (Bilingual), UCLM – 4 honors 2016 – 2020

ADDITIONAL ACHIEVEMENTS

 SISTEDES - NTT Data Award (MSc Thesis) 2022

 Charles Babbage Award (MSc Thesis) 2021

 Best Academic Record (MSc) 2021

 Third Award in “Hack For Albacity” Hackathon (BSc) 2020
